The White Plague

Synopsis

A warm day in Dublin, a crowded street corner. Suddenly, a car-bomb explodes, killing and injuring scores of innocent people. From the second-floor window of a building across the street, a visiting American watches, helpless, as his beloved wife and children are sacrificed in the heat and fire of someone else's cause. From this shocking beginning, the author of the phenomenal Dune series has created a masterpiece. The White Plague is a marvelous and terrifyingly plausible blend of fiction and visionary theme. It tells of one man's revenge, of the man watching from the window who is pushed over the edge of sanity by the senseless murder of his family and who, reappearing several months later as the so-called Madman, unleashes a terrible vengeance upon the human race. For John Roe O'Neill is a molecular biologist who has the knowledge, and now the motivation, to devise and disseminate a genetically carried plague-a plague to which, like those that scourged mankind centuries ago, there is no antidote, but one that zeros in, unerringly and fatally, on women. As the world slowly recognizes the reality of peril, as its politicians and scientists strive desperately to save themselves and their society from the prospect of human extinction, so does Frank Herbert grapple with one of the great themes of contemporary life: the enormous dangers that lurk at the dark edges of science. The White Plague is a prophetic, believable, and utterly compelling novel.

If you're looking for another "Dune", be warned: This book takes place on Earth, albeit an Earth that is about to go through some huge changes. Our story opens with the death of the wife and children

of brilliant biochemical researcher John O'Neill at the hands of terrorists. O'Neil is driven mad with grief and unleashes a biochemically engineered plague on the world, one that is 100% fatal to women. While not Herbert's best book, it is still fantastic. Frank paints a horrific picture of governments racing first against each other to be the first to find a cure, and soon realising that a cure will only come with cooperation. Each country deals with the plague differently and the sweep of the story stretches around the world and back to the beginning as O'Neil admires his handiwork. The story is quite action driven for a Herbert book. With most women dying off, the planet soon becomes unrecognizable. Will a cure be found in time? What form will it take? How will humanity survive? Herbert's trademark philosophical ruminations are there, just below the surface for plucking if you're interested. I will say, though, that the irony of thousand-year-old cultures having to re-write themselves overnight in the name of survival wasn't lost on me. Even more tantalizing is the ending which will leave you wondering what will happen next. Not that there's a cliffhanger, but the world is so different you imagine a sequel would have done very well. This is a really good book. It may drag a bit in spots and some of the science involved is a bit dated, but it is still very enjoyable. There's something wrong when a book as good as this one written by a author as popular as Herbert is out of print.
